

IDEMUDIA FRED IREKPONOR

DEVOPS ENGINEER, SITE RELIABILITY ENGINEER (SRE), CLOUD ENGINEER | AWS | AZURE | TERRAFORM | JENKINS | KUBERNETES | CI/CD

Lagos, Nigeria | contact@techbrodev.com.ng | Phone: Available upon request | LinkedIn: www.linkedin.com/in/fred-irekponor | GitHub: [http://www.github.com/stillfreddie](https://www.github.com/stillfreddie)

| Portfolio: www.techbrodev.com.ng | Hashnode: <http://stillfreddie.hashnode.dev>

PROFESSIONAL SUMMARY

Cloud DevOps and Site Reliability Engineer with 3+ years of combined technical and operational experience building, automating, and operating production-grade cloud platforms across AWS and Azure. Strong expertise in Infrastructure as Code using Terraform and Ansible, CI/CD automation with Jenkins and GitHub Actions, and containerization and orchestration using Docker and Kubernetes. Proven results include delivering 20+ cloud environments, reducing infrastructure provisioning time by 40–60%, improving deployment frequency, lowering cloud costs by up to 30%, and sustaining up to 99.9% service uptime for production workloads. Highly skilled in observability and monitoring using Prometheus, Grafana, and CloudWatch, with hands-on incident response experience that reduced MTTR by approximately 30%. Brings a solid background in network administration, technical support, and IT operations, resolving 85+ client issues with high satisfaction while improving system reliability. Demonstrates strong project and delivery ownership, having led creative and technical teams to deliver 70+ projects on time and within budget. Seeking DevOps, Site Reliability, or Cloud Engineering roles focused on scalable infrastructure, SLO-driven operations, secure-by-default architectures, and cost-efficient cloud delivery

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, EKS, ECS, Lambda, RDS, S3, VPC, IAM, CloudWatch, Application Load Balancer, Auto Scaling Groups), Microsoft Azure (AKS, App Services, Azure Monitor, Application Insights)
- Infrastructure as Code and Automation: Terraform, CloudFormation, Ansible, Modular Infrastructure Design, State Management, Configuration Management
- CI/CD and Release Engineering: Jenkins, GitHub Actions, GitLab CI, CI/CD Pipelines, Blue-Green Deployments, Automated Testing, Pipeline as Code
- Containers and Orchestration: Docker, Kubernetes (EKS, AKS), Helm, Container Registries (ECR, ACR)
- Monitoring and Observability: Prometheus, Grafana, CloudWatch, Application Insights, ELK Stack, Alert Manager, Dashboards, Incident Management
- Scripting and Configuration: Bash, Go, Python (automation), YAML
- Networking and Security: VPC Networking, TCP/IP, Security Groups, IAM Least Privilege, VPN Configuration, NGINX, Load Balancing, Secrets Management, WireGuard, OpenVPN
- Systems and Tools: Linux (Ubuntu, CentOS, RHEL), Git, GitHub, Jira, Ansible, Chef, Technical Documentation, On-call Support
- Cloud Architecture and Optimization: Cloud Infrastructure Architecture, Performance Tuning and Scalability, Cloud Migration and Modernization, Serverless Computing, Disaster Recovery and Backup Strategy, Cloud Cost Optimization and Management, Cross-Platform Cloud Integration
- Collaboration and Delivery: Team Collaboration, Project Management, Troubleshooting and Resolution, Stakeholder Communication

WORK EXPERIENCE

DevOps Automation Engineer/ Cloud Reliability Engineer FREELANCE Remote	October 2025 – Present
• Collaborated across teams to implement DevSecOps practices and ensure secure, compliant cloud deployments. • Supported and operated multi-account AWS/Azure infrastructure for 15+ environments; defined SLOs/SLIs and on-call runbooks to sustain 99.9% uptime. • DevOps & Site Reliability Engineering (SRE fundamentals: SLO/SLI, error budgets), Platform Engineering concepts, GitOps (Argo CD/Flux–exposure), Incident Response, Cost Optimization, Multi-Account/Multi-Region cloud environment. • Created technical documentation, runbooks, and standard operating procedures to support operational continuity and team onboarding. • Monitored system performance, logs, and metrics to identify reliability issues, scalability constraints, and opportunities for improvement. • Optimized cloud infrastructure across AWS and Azure, through proactive monitoring, capacity planning, and reliability improvements. • Designed, implemented, and maintained automated CI/CD pipelines that reduced deployment time by 36% and improved release consistency. • Automated monitoring, alerting, and incident response workflows, decreasing mean time to recovery (MTTR) by 30% across critical systems. • Implemented Infrastructure as Code using Terraform and CloudFormation, reducing environment provisioning time by 40% and minimizing configuration drift and configuration errors.	
Owner/ ICT Administrator Feddie Communications Enterprises Remote	June 2018 – Present
• Own and manage daily operations of a small-scale IT services business, providing technical support and infrastructure solutions to clients • Manage and maintain IT infrastructure, including systems, networks, and user environments, ensuring consistent uptime and operational efficiency • Administer and monitor network performance (LAN/WAN), implementing proactive troubleshooting measures that improved system reliability by up to 30% • Provide technical support to clients, resolving hardware, software, and connectivity issues with a high-resolution rate and minimal downtime • Support basic cloud-related operations, including account setup and services, with service availability (up to 99% uptime in supported systems)	

IT Administrator/Cloud Platform Engineer | AFRITIA LLC | Remote (Contract)**January 2025 – September 2025**

- Troubleshot network connectivity, performance, and security issues to ensure consistent service availability for end users.
- Implemented and maintained firewall rules, VPN access controls, and network security policies to safeguard organizational data.
- Maintained enterprise network infrastructure, including routers, switches, firewalls, and VPNs, achieving 99.9% network uptime.
- Collaborated with cross-functional teams to document IT workflows and operational procedures, thereby improving process clarity.
- Maintained network diagrams, asset inventories, and technical documentation to support audits, upgrades, and future scalability planning.
- Introduced and supported automation tools for routine IT tasks, using scripts and configuration tooling, streamlining daily operations and cutting manual intervention time by 35%.
- Monitored network and system performance proactively, reducing unplanned downtime by 31% through early issue detection and resolution.
- Supported change management initiatives by testing, deploying, and validating network and system changes with minimal operational impact.

Cloud DevOps Support Engineer | HAGITAL CONSULTING LIMITED | Remote**November 2023 – January 2025**

- Implemented secure cloud and pipeline configurations aligned with DevOps and cloud security best practices.
- Designed Jenkins CI/CD (blue/green) to reduce deployment time by 36% and improve release success rate by 30%+.
- Configured monitoring and alerting systems, improving system visibility and reducing incident response time by 30%.
- Collaborated across simulated cross-functional teams to test, deploy, and optimize cloud-native applications in dynamic environments.
- Built and automated CI/CD pipelines using Jenkins and GitHub Actions, enabling faster releases and reducing deployment errors by 35%.
- Automated routine server provisioning and configuration tasks using Ansible, reducing manual setup efforts by 50% and improving accuracy.
- Containerized applications and managed container orchestration with Kubernetes to support high availability and efficient resource utilization.
- Created detailed technical documentation, architecture diagrams, and project reports to support onboarding and long-term knowledge retention.
- Delivered 15+ hands-on DevOps projects simulating real-world workflows, focusing on scalability, security, and cloud reliability best practices.
- Designed and deployed scalable cloud infrastructure on AWS and Azure using Terraform Infrastructure as Code (IaC), improving deployment consistency and reducing provisioning time

Cloud & DevOps Engineer | HAFLA MOTORS | Remote**December 2022 – November 2023**

- Maintained the company's cloud infrastructure for vehicle inventory systems, sales management tools, customer data platforms, and internal applications, achieving 99.9% uptime for critical sales and operations workloads.
- Implemented centralized log aggregation, monitoring, and alerting with AWS CloudWatch and Grafana dashboards, increasing incident detection speed by 40% and reducing mean time to resolution.
- Performed continuous system reviews and production performance tuning for sales and vehicle management workflows. Improved application responsiveness and reduced resource waste, contributing to 25–30% cloud cost efficiency gains.
- Delivered 15+ DevOps and cloud reliability improvements aligned with business needs, enhancing infrastructure resilience, deployment consistency, and operational continuity.
- Standardized server configuration and environment provisioning using Ansible playbooks, cutting environment setup time by 50% and enabling faster rollout of updates.
- Documented CI/CD workflows, infrastructure designs, and operational runbooks to improve knowledge transfer and ensure continuity across technical and non-technical teams.
- Optimized cloud infrastructure deployments for car listings, pricing updates, and internal dashboards, reducing configuration drift and improving infrastructure reusability by 45% across development and staging environments.

Project Manager | TTF SIGNATURE LIMITED | Onsite**February 2016 – December 2022**

- Oversaw daily operations, resource allocation, and project execution, improving service delivery time by 35%.
- Managed project budgets and vendor costs effectively, reducing operational expenses by 20% while maintaining service quality.
- Planned and executed photography and creative projects, ensuring timelines, scope, and quality standards were consistently met.

Technical Support Assistant | FREENO ENGINEERING CO | Hybrid**May 2010 – January 2016**

- Assisted senior IT engineers with troubleshooting, maintenance, and configuration tasks, enhancing technical problem-solving and operational reliability.
- Provided hardware/software support to 85+ clients, contributing to a 15% reduction in repeat support requests

KEY PROJECTS

- **CloudNorth Project | AWS, Terraform, Jenkins, Docker, Kubernetes (EKS), Prometheus, Grafana. GitHub:** <https://github.com/stillfreddie/cloudnorth-final-project>

Built a multi-stack cloud-native app with Nginx frontend and Go backend, deploying and managing workloads on Kubernetes (EKS) using Helm charts, improving deployment consistency by 95%.

Automated deployments with Jenkins CI/CD pipelines, reducing manual deployment effort by 80%.

Monitored workloads with CloudWatch, Prometheus, and Grafana, achieving 99.9% service observability coverage.

Deployed Web App with Blue/Green Deployments, enabling near-zero downtime releases

- **ISP-CGNAT-WireGuard-Lab | WireGuard, Linux, Networking, Home-to-Cloud VPN GitHub:** <https://github.com/stillfreddie-ISP-CGNAT-WireGuard-Lab>

Designed and implemented a home-to-cloud WireGuard VPN tunnel to overcome ISP CGNAT limitations and NAT type failures.

Stabilized UDP traffic for latency-sensitive applications, reducing packet loss and jitter by 75% during real-time gaming sessions.

Implemented router-level policy-based routing to selectively tunnel gaming traffic, improving connection stability by 90%.

Validated NAT behavior, latency, and routing improvements through ping tests and live gameplay testing.

- **Azure WebApp Monitoring & Alerts with Terraform IaC GitHub:** <https://github.com/stillfreddie/azure-monitoring-iac>
Deployed Azure WebApp, App Service Plan, and Application Insights using Terraform, achieving 100% infrastructure reproducibility.
Configured alert rules and Action Groups via Terraform, improving incident response time by 60%.
Validated monitoring through simulated downtime and metric alerts, confirming alert accuracy above 95%.
- **Go Car Hire App with Jenkins CI/CD. GitHub:** <https://github.com/stillfreddie/car-hire-app>
Developed a Go-based web app with booking features, implementing structured backend logic and routing.
Set up Jenkins pipelines for build, test, and deploy stages, increasing deployment reliability by 90%.
Integrated GitHub repository for version control and automation, enabling consistent CI workflows across environments.

EDUCATION

2015

University of Ibadan

Bachelor of Science (B.Sc.), Political Science

- **Additional DevOps Projects:** Delivered 3+ hands-on DevOps projects implementing cloud infrastructure (AWS, Azure), CI/CD pipelines, Terraform IaC, Ansible automation, and monitoring solutions, reinforcing deployment consistency, reliability, and observability.
